AI Solutions for Low-Resource Languages

Sovereign, High-Performance, and Grounded Context for Rwanda & Africa

*"We are building AI for low-resource languages where big tech companies are not looking
— starting with Kinyarwanda"*

About Us

Scan to visit ejolabs.com/en

Ejo Labs Builds the First **Production AI** for **Kinyarwanda**

We build Kinyarwanda-native conversational AI and secure agentic workflows with deep local context to deliver sovereign AI solutions for Rwanda.

1K+

DAILY ACTIVE USERS

500+

REGISTERED USERS

- ▶ **Local Expertise:** Deep understanding of Rwanda's language, culture, and business environment.
- ▶ **Sovereign Infrastructure:** Focus on secure, compliant deployment (on-premise or local cloud nodes).
- ▶ **Practical Impact:** Focused on automating operations and creating immediate efficiency.

Our Vision

To close the technological gap in low-resource languages by building sovereign AI that empowers the next billion users in Africa.

Who We Serve

Local Rwandan businesses, public agencies, and agricultural communities seeking automated, high-fidelity AI workflows.

20M+ Kinyarwanda Speakers Are Excluded from Modern AI

"I asked the AI a question in Kinyarwanda. It responded in French — a foreign language, not of home."

20M+

Kinyarwanda speakers across Rwanda, DRC, Uganda, Tanzania & diaspora

Wikipedia / Language Lizard, 2024

98%

of African languages have zero support in any major LLM

10–20%

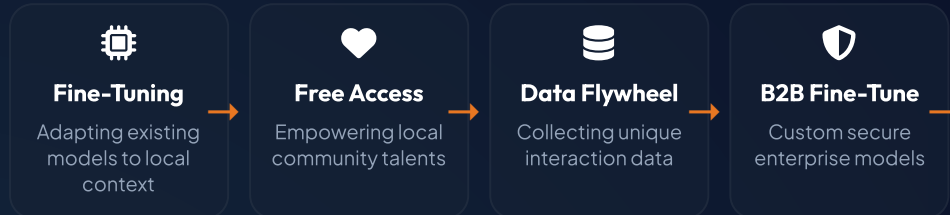

sentence recognition for Hausa (94M speakers) in ChatGPT

Nature, July 2025

- ▶ **Beachhead Customer:** Rwandan B2B enterprises — fintechs, schools, and government agencies — who need AI in Kinyarwanda today.
- ▶ **Structural Gap:** Big tech ignores low-resource languages. Local organizations lack the AI tools their operations demand.

EjoChat: Foundation Core, **Proprietary Data Flywheel**

We leverage state-of-the-art foundation models optimized via fine-tuning with local context. By starting with existing open models and fine-tuning them, we avoid expensive training from scratch and focus entirely on community value and proprietary data collection.

- ▶ **Empowering Local Talents:** Offered free to the community, helping local talents solve critical real-time projects in Education, Health, and Agriculture.

Early Traction: Specific Proof at Every Stage

Our evidence spans technical validation, deployment, and commercial signals — not vague "interest" language.

Built

EjoChat live in production — native first Kinyarwanda AI assistant

Tested

84% positive feedback ratio from real users across Rwanda

Deployed

1,000+ daily users · 230+ registered accounts · growing every month

EjoChat API

Launched API free for developers/local talent, with premium Business & Enterprise packages

AI for Rwanda's National Priorities

Locally built Agentic RAG systems to solve critical challenges in agriculture, health, transport, tourism, and education

Infrastructure Secured

AWS Partner Network credits secured. Google Cloud multi-cloud backup. Qdrant vector DB for agentic RAG.

Core Interventions: Solutions Driving Real Impact

We focus our operations directly where the immediate market need and local community value reside — bringing AI to everyone.

AGRICULTURE

Smart Agriculture

Delivering crop-centric agrotech advice, pest diagnostics, and local weather alerts directly to smallholder cooperatives via basic phones in native Kinyarwanda.

📱 SMS & USSD DELIVERY

HEALTH

Maternal & Child Health

Automated AI-powered nutritional alerts and health advisories helping community workers track and manage child development metrics at the village level, with integrated first-aid guidance for everyone.

📱 SMS & USSD DELIVERY

ENTERPRISE AI

Enterprise AI Integrations

Secure, hallucination-free messaging integrations enabling clients to query catalogs, get instant support, and automate engagement across WhatsApp and other channels.

💬 MULTICHANNEL API DELIVERY

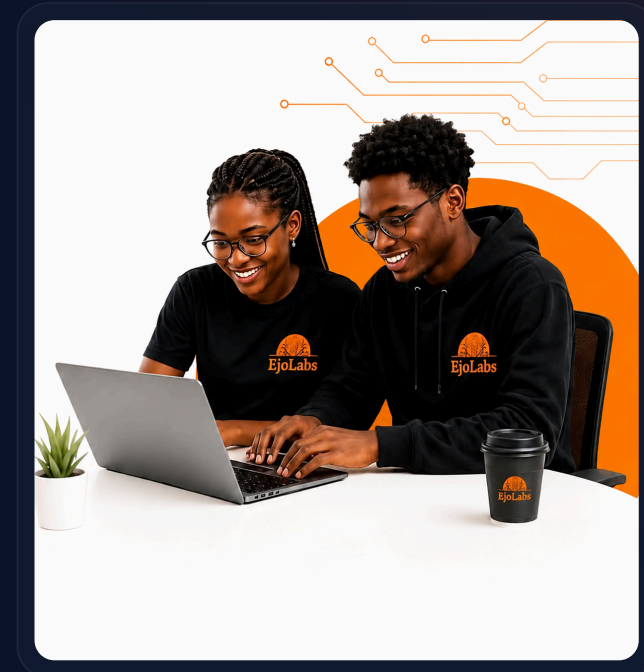

Skilling & Awareness: **Empowering Communities**

AI adoption is an educational challenge, not just a technical one.

Surveys in Rwanda show that while many citizens have heard about Artificial Intelligence, very few know how to use it practically to solve daily challenges. We are bridging this gap through hands-on education and community outreach.

Our youth-to-community flywheel builds a generation of young AI advocates first. Through the free EjoChat API, developer workshops, and hackathons, we empower local youth who in turn introduce these practical tools to their families and elders.

-  **Summer Talent Program** — 5-week remote software & AI engineering bootcamp.
-  **Free Developer API** — Giving local talents sandbox access to build custom solutions.
-  **Hackathon Event** — Program ends with a competition awarding prizes and certificate of participation.
-  **Expert Lectures & Teamwork** — Industry leaders sharing real-world experience, fostering collaboration, networking, and career skilling.

Why Now — What Changed

 **Rwanda hit 62% internet penetration** in 2025 and is investing \$200M (World Bank) in digital acceleration — Kinyarwanda tools are critical to serve the next 38%.

 **AI inference costs dropped 90%** in 2 years — making low-resource languages economically viable for the first time.

 **National AI Policy & Data Sovereignty** mandate local hosting and processing — favoring on-premise setups over US LLM APIs.

5-Year Growth Trajectory

YEARS 1 – 2 · CORE FOCUS

Agriculture, Healthcare & WhatsApp API

Deploying core SMS agrotech, malnutrition alerts, and B2B WhatsApp bots in Rwanda to secure cash flows and build the data flywheel.

YEARS 2 – 3 · SECTOR SCALING

Education, Tourism & Transport

Expanding to new sectors aligned with Rwanda's National Priorities (Visit Rwanda Concierge, Intelligent Transit, and School platforms).

YEARS 4 – 5 · REGIONAL REPLICATION

East African Cross-Border Expansion

Replicating our fine-tuned solutions to neighbouring markets (DRC, Burundi, Kenya, Tanzania) using existing local partnership channels.

Three Revenue Streams — Path to \$300K ARR in 18 Months

API for Companies

\$200 – \$25,000/mo

Fintechs, apps, telcos, SMS platforms, and developers integrate EjoChat via API. Recurring monthly subscription.

Enterprise Contracts

\$25,000 – \$1M/year

Governments, banks, schools, hospitals, and regional institutions. Long-term contracts with custom deployment.

Build Together

\$25,000 – \$500K/project

NGOs, UN agencies, donor programs, and data partners. Co-development projects with shared Kinyarwanda data.

ARR Scale Bridge

$$\begin{array}{ccccc} \mathbf{50} & \times & \mathbf{\$500} & = & \mathbf{\$300K} \\ \text{API CLIENTS} & & \text{AVG. MONTHLY} & & \text{ARR TARGET} \end{array}$$

+ Enterprise

UPSIDE FROM 2–3 LARGE CONTRACTS

Current Alternatives Fail Kinyarwanda — We Fill the Gap

Customers today choose between broken AI, expensive human translation, or nothing at all. EjoChat is the first real solution.

CRITERIA	EJOCHAT (EJO LABS)	CHATGPT / OPENAI	GOOGLE TRANSLATE	HUMAN TRANSLATION
Native Kinyarwanda Understanding	✓ Native context & RAG tuning	✗ Fails or replies in French/English	⦿ Partial, many errors	✓ Human quality
Cultural & Contextual Accuracy	✓ Rwandan team, local data	✗ No local context	✗ Literal only	✓ Context-aware
In-Country / Sovereign Hosting	✓ Local deployment ready	✗ US-hosted only	✗ US-hosted only	✓ On-site
Scalability & Speed	✓ API, instant	✓ API, instant	✓ Instant	✗ Days per document
Cost per Query	✓ \$0.001–\$0.01	⦿ \$0.01–\$0.10	✓ Free	✗ \$10–\$50/page
B2B Enterprise Integration	✓ Custom API & on-prem	⦿ Generic API	✗ No B2B offering	✗ Not scalable

A Rwandan Team **Built to Solve This Problem**

Every team member reduces execution risk — we have problem insight, technical capability, and market access.

Clear Milestones — From MVP to East African Expansion

PHASE 1 — NOW

Mid 2026

- ♦ 500+ active users on EjoChat
- ♦ Sign first paying B2B customer
- ♦ Launch EjoChat API publicly
- ♦ Close pre-seed funding round

PHASE 2 — SCALE

Late 2026 – Early 2027

- ♦ 1,000+ active users
- ♦ 3 enterprise customers signed
- ♦ Add health & education tools
- ♦ Raise seed funding

PHASE 3 — EXPAND

2027 – 2028

- ♦ 5M+ users across Rwanda
- ♦ Expand to Swahili, Kirundi, Lingala
- ♦ Government partnerships
- ♦ Series A (\$5M+)

Raising \$250K Pre-Seed to Reach \$300K ARR

The ask is not a number — it is a contract between founders and investors on what will be achieved.

Capital Allocation

- Go-To-Market & Sales — B2B pipeline, partnerships, demos
- Team — Key hires in engineering and sales
- Infrastructure — GPU compute, cloud costs
- Legal & IP — Data rights, compliance, incorporation

Building the Future of **AI for Rwanda**

We are building AI for languages like Kinyarwanda — where big tech companies are not looking. Join us in making AI accessible for the next billion users.
