

PARTNERSHIP PROPOSAL

An AI assistant that carries your community's knowledge to every new arrival.

RCA members spend hours helping individuals navigate German bureaucracy. We want to help you turn that knowledge into a resource that works at scale — available to every Rwandan arriving in Germany, anytime.

 Rwandan Community Abroad ·  Germany

THE CHALLENGE

One person cannot help a hundred.

Rwandans arriving in Germany — students, Azubi, young professionals — face a wall of unfamiliar processes. City registration (Anmeldung), health insurance, residence permits, and bank accounts. The information exists, but it lives in the heads of a few experienced community members who are already stretched thin.

When one person helps another navigate the Anmeldung, that knowledge disappears after the call. The next person starts from zero. And the person helping cannot scale — one call at a time, one person at a time.

Knowledge stuck in calls

Valuable guidance stays between two people and is never captured or reused.

Same questions, every time

Community leaders answer the same questions repeatedly with no way to scale.

Help isn't always available

Newcomers need answers at odd hours, on weekends, in moments of stress.

**OUR PROPOSAL**

A knowledge base that grows with your community.

Ejo Labs proposes to build an AI assistant for RCA — embedded in your website and WhatsApp — that captures the lived knowledge of your community members and makes it available to every new arrival, instantly, in the language they're most comfortable in.

Every time a community member helps someone navigate a process, we document it clearly and add it to the assistant's knowledge base. The assistant gets smarter with every interaction. The community leader helps one person — and that help reaches hundreds more.

CONCRETE EXAMPLE

How Anmeldung goes from one call to a community resource

- 1 Leader Guides Arrival**
They walk a newcomer through booking a registration appointment and the needed documents.
- 2 Ejo Structures Info**
We document the advice into a step-by-step vector-grounded Q&A file.
- 3 Arrivals Ask Assistant**
New arrivals ask questions via Web/WhatsApp in Kinyarwanda or English 24/7.
- 4 Base Grows Constantly**
Insurance, bank setup, and contracts are added, preventing repeated questions.

The Result: Mentors' time is saved for complex, high-priority issues that need genuine human support.

WHY THIS GETS BETTER OVER TIME

Every interaction makes the next one easier.

**Growing base**

Each case adds to a permanent community library resource.

**Multilingual**

Supports Kinyarwanda, English, French, and German.

**Replicable**

Easily extends to other global Rwandan communities.

**Escalation**

Routes complex queries to human leaders seamlessly.

WHAT WE NEED FROM RCA

A small commitment, to start.

- Access to knowledge:** Short recorded/written onboarding advice sessions with community mentors.
- Common questions:** List of top topics newcomers ask about to prioritize database ingestion.
- A digital home:** Integration with website/WhatsApp (Ejo Labs handles the technical setup completely).
- Ongoing feedback:** Community review as we test and improve the assistant during initial phases.

Let's build this **together.**

A short call is all it takes to align and get started.
